TECHNOLOGICAL HORIZONS IN EDUCATION

JOURNAL

Volume 21, Number 11, June 1994

ing real experiments tied to the courseware.

Lab packs, newly available, decrease the per-student price; network versions are also offered, as are editions for Windows-based PCs in addition to the originals for Macintosh. *Logal Software, Inc., E. Arlington, MA, (800) LOGAL USA.*

Pop-Up Messages Delivered on Screen

eNote delivers messages directly to a recipient's screen instead of a mailbox, where e-mail often sits.

A small floating panel performs all functions via drag-and-drop actions. Highlights are groupware functionality, folders, context searching and System 7 support.

Users on a cross-platform network will have compatibility with Windows-version eNote users. *E Ware, New York, NY, (212) 564-7791.* ☺

System Aids Disabled Students & Teachers

Providing workplace independence for disabled students and teachers, The SenSci System reduces the need for continuous care.

It comprises two major components. The Safko Server, which displays easily recognizable pictures that correspond to various functions on a Mac screen, allows disabled teachers to turn lights and appliances on and off, control heat and air conditioning, call a nurse or another teacher, operate TVs and VCRs, make and receive calls, and more.

The SenSci Navigation System contains over 50 titles for student productivity and rehabilitation. Sentence Construction Set allows students to speak via the computer; Recognition presents pictures, words and sounds for cognitive rehabilitation; and Connect the Dots teaches sequencing and numbers.

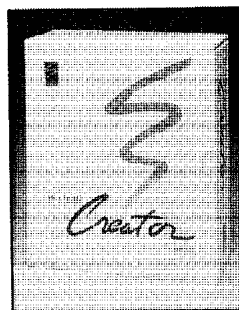

SenSci System-Direct includes the

above, plus cables and five environmental control modules. The complete system adds a Mac computer with 8MB of RAM, 120MB hard drive, 14" color monitor, keyboard, mouse and choice of input device as well as installation and training. *Safko International, Inc., Tempe, AZ, (602) 731-9805.*

Display Ad Layout Is Software's Forte

For college and university newspapers that offer color ads as well as advertising and art instruction, Multi-Ad Creator Version 3.6 suits Macintosh production environments.

Saves Time & Money

The software offers AppleScript support to automate time-consuming steps. A new TIFF engine ensures compatibility with more file formats; JPEG compression, GIF files, and PC-style EPS import and export are supported as well.

The program recognizes and fully separates custom spot color from imported EPS files; colors are added to palettes automatically.

Upgrades are offered at reduced prices. *Multi-Ad Services, Inc., Peoria, IL, (309) 692-1530.*

Use Printer to Label CD-R Discs

The CDP 5300 prints directly onto the surface of specially coated CD-R discs, labeling them with custom designs such as school logos or department names.

The Mac-based printer is suited for developing prototypes as well as high-volume duplication. *Trace Corp., San Jose, CA, (408) 437-3380.*
